Abstract

Information Technology, Globalization and Internet Effects on Administ Information Systems:

With Special emphasis On Jordanian Income Tax Department

The chief goals this thesis aimes to study the effect of Infor Technology, Globalization and the Internet in adapting Administrative Infor Systems, the adaptation of Administrative Information Systems, With S emphasis on the Jordanian Income Tax Department according to the interna and regional developments. This thesis also goes into the research relations be the important variables related to these aspects.

In the light of the aforementioned, the present research is stress incapability of any system to overcome the effects of globalization on their econ systems. It also determines the frame of the economical systems as one imp axis upon which administrative resolutions are based. In particular, those i resolutions which support state budget and enhance its abilities to a comprehensive growth projects and to develop sectors which cont effectively, in promoting its financial capabilities. Jordan is a country that shortage of areas such as natural resources and technical experties.However , th an abundance of man power .

The Ministry of Finance and its respective departments , and partic the Income-Tax Department are considered the major concern of the govern and therefore, the problem of research is dealt with in three frameworks :-

First : The theoretical frame talks about the relationship between rationalit decision and its impact upon the total income process which cannot explained without technology and enough human resources.

Second : The theoretical frame discusses the feasibility of applying E-Governm in the Jordanian economy in light of recent technological development .

Third : The frame of the realastic vision through which the researcher v answerthe qestions and assumptions in order to find practical and scienti interpretations for the research questions .

This researsh aims to enrich and develop the theories. In the area

This research aims to specify the gap between ambition and reality of t current information in a global context. It also aims to implement this with current information systems in the field discussed. As well as other objectiv

discussed in the place of research.The research hypothesis was determined by fou aspects:

The first aspect discusses the connection of available informat features and their relation with technological level used for the purpose bridging revealing the gap between Globalization requirements and current Jor Informaton Systems.

The second aspect discusses the relationship between the reali decision and the set of variables of the information system represented suitability, cost, flexibilityand its value .

The third aspect of the hypothesis discusses the relationship betw the set of personal factors individually , and its role in the effectiveness income tax information system.

Whereas the Fourth study : the Jordanian Economic community opini towards Internet, Globalization, and E.Government . Data collection a group indications which the researcher has reached through the theoretical content the research text. This has been examined and verified by extending it tc group of experts and arbitrators. For the purpose of Data collection, the researc used them according to .

The research balls within six chapters:
